Title: Management Of Infected Nasal Dermoids

Presenter: Charles Elmaraghy, MD

Affiliations: Nationwide Children's Hospital

ABSTRACT

Pediatric nasal dermoids most frequently present as a painless nasal mass. However, presence of acute infection compromises surgical approach and may require initial surgical intervention prior to definitive management. We will present our experience with infected nasal dermoids and discuss peri-operative management strategies, surgical approaches for excision, specific considerations in the acute setting to optimize definitive management.
